

CLAIMS

Shm
av We claim:

1. A method for automatically managing energy cost using metering data and pricing data comprising the steps of:

5 receiving metering data from an electric meter, wherein the metering data is electronically transmitted from said electric meter;

receiving pricing data, wherein the pricing data is associated with a plurality of sources of power;

forecasting a forecast load based on the received metering data from the electric meter;

10 and

determining an optimal consumption decision based on the received pricing data and the forecast load.
